

You can reduce the risk of infection by using the Chlorhexidine technology of HIBiSCRUB® and our new generation products HIBi Wash+ and HIBi Gel Hand Rub+. These are proven to be effective against a broad range of bacteria and fungi. They not only kill the bacteria, but HIBi Wash+ and HIBi Gel Hand Rub+ continue to kill for up to 6 hours, which conventional washes and alcohol gels do not. These products are the same as those used by Healthcare Professionals in hospitals.

HIBi Wash+
